Empowering a sales team to become top dog

The global pet food industry leader uses the Oculus for Business platform to drive efficiencies throughout its sales organization.
See how Nestlé Purina PetCare enhances training, improves retail shelf planning, and breaks down barriers to collaboration with Oculus for Business.

Reducing costs and building trust with virtual factory tours

PetCare salespeople spend their days talking to retail customers about product quality and innovation, but many of them have never seen firsthand how the company produces its pet food. The costs of travel and lost productivity are just too high.

To address this gap, the company created a 360-degree video tour of one of its factories. Now, sales employees can put on Oculus Quest headsets for immersive learning experiences that are safer, less distracting, and more cost effective than in-person tours. They can better understand the production process and see how the company achieves its quality and food-safety standards. The virtual experience builds trust, and it inspires salespeople to convey that sense of trust to customers.

Making retail shelf planning more efficient and effective

The sales team has always crunched vast amounts of data to plan the most effective retail shelf displays. And with Oculus for Business, they can adjust displays in a virtual space to respond more quickly to new sales data. Now, they render their retail planograms in VR along with 3D sales data that used to live only in Excel, so when they’re visiting stores they can fire up their Oculus Quest headsets, see up-to-date sales numbers, adjust the planograms virtually, and present them to store managers.

Bringing people together in virtual meetings

Oculus for Business is helping connect salespeople who aren’t in the same location. The team can now conduct training sessions by inviting everyone into a virtual meeting space to review content and use dynamic tools like white boards. Training Manager Gene Feldman thinks that using Oculus will help the company recruit a more technically fluent workforce in the future.

Full virtual reality in the Quest environment is like no other that I’ve seen so far.”

The Oculus for Business advantage

Max Andaker, Global Digital Innovation Manager for Nestlé, says that VR with Oculus makes training more accessible. “What I think is truly unique about the Oculus Quest is that it merges the high quality of an enterprise-grade device with the affordability of a consumer device,” he says, “and that will make it a lot more scalable for us.” He also sees advantages in the enterprise tools that are part of the Oculus for Business platform. “They simplify the whole device management piece, which had been a headache up until this point,” he says. “The Oculus team is also thinking about all the things around security and scalability that you have to take into consideration when you want to do something at the enterprise level.”

Nestlé Purina PetCare has only just begun to explore the possibilities of Oculus for Business. “VR is like an iceberg — you only see the top 10% of it,” Gene Feldman says. “We have no idea where this technology is going to take us, and that’s the most exciting part.”

The Oculus Quest was phenomenal in getting us to move faster. Now we don’t have the wires, and we have a mobile package that works for us.”
